atotitum ~ Becoming of Age: Inspiring healthy sexuality OR decolonizing sexuality and wellness through “Identity Medicine” to prevent, reduce and eliminate HIV/HCV/STBBI inequities among Indigenous youth in Saskatchewan, Grant, Operating
Project Description: There is an urgent need to develop culturally rooted approaches to promote sexual health and overall wellness among Indigenous youth. Our primary purpose is to co-create a community-led culturally rooted program, including a sexual health curricula and resources, that promotes sexual health, gender-re-awakening, self-confidence and wholistic wellness among Indigenous youth in Saskatchewan. Etuaptmumk (Two-eyed Seeing) will be applied to braid Indigenous ways of knowing, being and doing about sexuality, gender roles and responsibilities with Western knowledge of HIV/HCV/STBBI. A Community Guiding Circle composed of Indigenous Elders, youth, teachers and those with lived experience will guide the project. This project will support the development of a culturally safe and inclusive program that works with multi-generational groups to

interweave Indigenous and Western teachings of sexuality, sexual health and wholistic wellness.

Testing, Reaching the Undiagnosed and Linkages to Care: "REACHing" for impact, Grant, Operating

Clinical Research Project?: Yes

Project Description: Our proposed team grant is aligned with this funding opportunity's Biomedical Prevention pillar - we address areas of testing and HIV medications to prevent transmission (PrEP and PEP) and biomedical and clinical interventions and evaluations of preventive strategies. We aim to generate knowledge on various innovative strategies for clinical and public health delivery of prevention and care services for HIV, HCV, and other STIs. Specifically, proposal aims to assess various testing approaches to identify infections at an early stage and link those at risk for HIV with clinical prevention services such as PrEP and PEP. Similarly, those testing HIV positive will be linked with care and treatment to reduce overall burden of infection in the community to prevent further transmission through treatment as prevention.

Exploring the impact of Spinal Bulbar Muscular Atrophy on persons self-identifying as Indigenous, Grant, Operating

Project Description: Spinal bulbar muscular atrophy (SBMA) is a genetic disease. It causes weakness, and difficulty with speaking, swallowing and breathing. Recently, we found a very high prevalence of SBMA in Indigenous people in Saskatchewan. Indigenous people affected by SBMA have told us of their wishes for more research. We have identified an approach called "photovoice" as a way to show the lived experience of people with SBMA. Pictures are used to show their lived experience. They then join group discussion with researchers. No studies to date have used the photovoice method in SBMA. Our team's approach adapts photovoice to Indigenous methods. We will explore the findings from photovoice using sharing circles. This study will give voice to a community that has not previously been heard. It will increase awareness about SBMA in Indigenous communities. This will hopefully help SBMA patients get access to the resources they need.

Indigenous knowledge development centres with a focus on wellness – miyo-pimâtisiwin, Grant, Operating

Project Description: Most health research is focused on a disease or deficit end-point, whether designing, testing or implementing interventions, treatments or preventive measures. The focus of this Indigenous knowledge development project is on wellness—promoting, maintaining and re-gaining wellness, by itself, or in the context of a variety of

conditions or life circumstances that First Nations, Inuit and Métis peoples may find themselves. There is much Indigenous health and wellness knowledge/ wisdom that has yet to be awakened or re-awakened, and such knowledge is not yet well-supported given the current colonized structures and conceptualizations. Awakening Indigenous health and wellness knowledge will require the reconstructing and re-development of community roles and wellness processes. It is within this context that we see Indigenous community as being the primary research leader, with the academy and the health system as being knowledge users.

Wiidooktaadyang [we are helping each other]: Understanding the experience of wellness and helping in Nipissing First Nation, Grant, Operating
Project Description: Indigenous peoples have conceptions of what it means to live well. Wiidooktaadyang, an Anishinaabemowin term meaning 'we are helping each other,' emphasizes relationality and recognizes that Indigenous peoples help each other to realize wellness. From this relational approach, the research team will explore how onand off-reserve members, front-line service providers, and staff of Nipissing First Nation understand and experience wellness. The team will also inquire what is perceived as the "appropriate kind of help" to facilitate wellness. It was acknowledged by Nissiping First Nation leaders and Elders that a newly developed, community-based service-delivery model called Wiidooktaadyang can be further informed by a broad understanding of wellness. The knowledge gained form this exploration of Nipissing First Nation members' perceptions of wellness and appropriate help will be translated with an aim to facilitate implementation of the Wiidooktaadyang model.
